

Supplemental Figure 1: Cell proliferation assay evaluating low (100 nM) and high (3 μ M) doses of cabozantinib in the presence of HGF stimulation for a) A498 and b) 786-0 cell lines. Statistically significant ($p < 0.05$) differences are shown for comparisons between Control vs HGF (*) and HGF vs HGF and cabozantinib (#) using One-Way ANOVA analysis.
