

Figure S1. Inhibition of PI3K/AKT did not affect proliferation of pancreatic cancer cells with *ARID1A* silencing. A, B. PANC-1 and SW1990 cells were transfected with siRNA targeting *ARID1A*. The cells were seeded and cultured in 96-well plate. 24 hours later, LY294002 or mk2206 were added. MTT method was used to measure the cell proliferation at day 1, 2, 3 and 4. OD value was evaluated and plotted with respect to time.
