

Fig. S1

**Figure S1.** RKO and HCT116 cells which treated with 0, 50 and 100  $\mu\text{g/mL}$  of baicalin and 25  $\mu\text{g/mL}$  of 5-FU for 48 h were assayed for apoptosis by flow cytometry with Annexin V / propidium iodide double-staining. The apoptotic cells increased with increase of treated concentration of baicalin. The positive control was the cells treated with 25  $\mu\text{g/mL}$  of 5-FU.
