

Supplemental Figure 1. Candidate miRNAs that may interact with NNT-AS1. The RNA pull-down experiment found that in HEC-1-A cells, miR-30c, miR-320a, miR-22, and miR-424 were enriched in NNT-AS1 pulled-down complex. One-way ANOVA followed by Tukey's post hoc test was used for statistical analysis. **p < 0.01, ***p < 0.001, compared with NC probe.
